

Make your own water filtration system

1. Cut a 2-liter bottle in half
2. Remove the cap and cover the end with a coffee filter using a rubber band
3. Turn the bottle upside down and place in a container
4. Layer fine sand, coarse sand and gravel in the bottle
5. Slowly pour clean water in the top to filter through the system
6. Slowly pour dirty water through the system and watch it come out clean!
